Rocket® Services Packages for UI/UX Modernization

Accelerate Your Modernization Project

- Faster return on your investment goals

- Short path to proficiency in modernization techniques, without retooling skills

- Repeatable operating framework for current and future modernization projects

- Maximized use of your Rocket software through user and administrator training by Rocket experts

Organizations worldwide use Rocket® LegaSuite and Rocket® API to unlock data and applications for IBM® i systems and other host-based systems—without recoding or re-platforming. Rocket LegaSuite extends and modernizes the green screens found in many enterprise applications, adding HTML 5-based portability and functionality that goes far beyond the usual "screen scraping." Rocket API securely exposes in-place applications and programs as RESTful APIs through HTTP interfaces and JSON data interchange format, enabling easy integration with web or mobile applications.

No matter what your goals or level of in-house expertise, Rocket service packages for modernization can help you deliver business value faster. Whether you are meeting a near-term deadline for deploying a web UI, or creating microservices that extend your workflows to mobile devices, you can achieve results more quickly.

Rocket service packages take the time and risk out of buying the right services for your business goals—because our packages are based on proven deliverables across thousands of successful customer engagements. Service packages are matched to your needs—including size of installation, stage (deployment or integration and customization), or resources. Rocket technical consultants are experts in bringing our software to production quickly. We'll help you get your modernization initiative off the ground, and leave you with a foundation to build on far into the future.

We also do custom consulting for customers whose needs don't exactly fit into an existing package. Just ask us for a quote for a custom engagement.

PACKAGE	STAGE	WHAT YOU GET
UI Modernization Base	Deployment	For customers coming from an existing green screen application to LegaSuite Web UI. This is the foundation implementation, to which "add-ons" can be applied to expand the services offering. • UI Design: Convert up to 10 screens using automated tool for UI approval • Modernize: Convert existing screens into modern web panels • Training and mentoring • Deployment assistance • Baseline performance testing for web panels
UI Modernization Add-Ons	Integration and Customization	For customers that want to expand beyond the foundational UI Modernization package we have provided add-on options to include: • Addition screen conversions • External application integration • Enhanced UI design • Workflow improvements • SSO integration • Advanced implementation assistance
UI Migration	Integration and Customization	For customers with an existing LegaSuite GUI (J Walk/WinJa) implementation that want to migrate to LegaSuite Web UI, we offer options to accelerate migration. This is the foundation implementation, to which "add-ons" can be applied to expand the services offering. • Migration support to convert existing pages into modern web panels • Training and mentoring • Deployment assistance • Baseline performance testing for web panels

PACKAGE	STAGE	WHAT YOU GET
UI Migration Add-ons	Integration and Customization	For customers that want to expand beyond the foundational UI Migration package we have provided add-on options to include: • Advanced script migration • External application integration • Enhanced UI design • Workflow improvements • SSO integration • Advanced implementation assistance
